2.1.2 Side key description

The side key of the phone is very usefull.

1. Power key : Long press this key to switch the phone on or off.

2.1.3 Battery

New batteries only have 50% capacity and you can use it after unpack. A new battery will require two or three times full charge/discharge cycles in order to achieve its optimum performance.
Charging the battery

- Plug the charger into the appropriate electrical outlet.
- Plug the charger into the charger port at the bottom of the phone.
- The charging indicator icon starts to flash. If charging with phone off, the display will show a picture to indicate the charging process is going. If your battery is too weak, maybe the charging indicator icon can only appear after some time.
- If the charging indicator icon stop flash and show fully, it meas the charging is complete. If charging with phone off, the display will show a picture to indicate the charging is complete. The charging procedure will last 3 or 4 hours normally and in this procedure it is normal that the battery, phone and charger will become hot.
- After charging is complete, disconnect the connector from the phone and unplug the charger from electrical outlet.

Attentions :

- Charge battery at the temperature between +5°C~ +40°C and the place should be with good ventilation. Use the charger provide by manufacturer. Other chargers may cause damage and will disobey the the warranty obligations.
- Charge battery in time when phone switches off automatically or shows the warning that battery low. The charging time varies along with the capability.
- The standby time and talk time are based on the ideal environment. It varies according to the network condition, working environment and how you use your phone.
- After charging is complete, please disconnect the connector from the phone and unplug the charger from electrical outlet
- If the charger still plugs in the charge slot and the phone has been fully charged, the phone will check the battery state automatically, and recharge the battery once it is not at full level after a long time (about 5~8 hours). But this will decrease the performance and life of your battery.

2.1.4 Connect to network

SIM Card

You have to insert a validate SIM card before you use it. SIM card is the key to let you log in digital GSM network.

SIM card contains all the information needed to setup the network connection, your call history, names and phone numbers you saved in address book and short messages you received. It can be removed from your phone and used in any GSM phone (New phone can read information from SIM card automatically).

Do not touch metal areas on the SIM card to avoid loss or damage the information inside. Keep SIM card away from electric fields and magnetic fields. You can not log in the GSM network with a damaged SIM card.

Wainig: Make sure the phone is switched off before you remove SIM card. It is forbidden to insert or remove SIM card when external power is connected to the phone, or the SIM card might be damaged.

Insert and remove SIM card

SIM card is stored in a card usually and you should take it out carefully before use it.

- Switch off your phone; remove battery and other external powers.
- Insert SIM card to the SIM card carrier as shown in the picture.
- When you need to remove SIM card, please switch off your phone first, remove battery and then remove SIM card.

Power on or off

To switch on the phone, please long press the power on/off key in the side of the phone or  ; To switch off the phone, please do it again.

If you switch on the phone without SIM card, the phone will ask you to insert a SIM card. After the SIM card is inserted, the phone will verify it.

Then the notice below will be shown in sequence:

Input PIN1 —— If you already set PIN in the SIM card

Input Password —— If you already set the phone unlock password, the initial password is “0000”

Searching —— The phone is searching for a network, it will be shown until an available network is found

Unlock SIM card

To avoid illegal usage, PIN1 is used in the SIM card to encrypt data. If you activate this function, you have to input PIN1 to unlock the SIM card every time when you switch on the phone. Then you can use it to make or receive calls. Also you can deactivate this function (Refer to “Security” in section 7.3), in this condition, the SIM card can not avoid illegal usage.

- Switch on phone by long pressing the power on/off key  .
- Input PIN1, press the right soft key to clear input, press left soft key to enter PIN1. For example, if the PIN1 is 1234, please input like this:

1 2 3 4

If the PIN1 is entered incorrectly three times, the SIM card will be barred by the network, and then the phone will ask for the PUK1, if you don't know the PUK1, do not try it, please ask your network provider for help. For more information, please refer to “Security” in section 7.3.

Attention: A standard PIN1 (4~8 digits) is set in your SIM card by your network provider, please change it right away. The details please refer to “Security” in section 7.3.

Unlock phone

To avoid illegal usage, this phone contains a password protection function. If you activate this function, you have to input the password to unlock it after PIN1 is entered (if PIN1 is set) every time when you switch on the phone, then you can use it to make and receive calls. You also can deactivate this function, in this condition, the phone can not avoid illegal usage.

- Input phone unlock password, press right soft key to clear input, press left soft key to enter password. For example, if the password is 1122, you have to input like this:

1 1 2 2

If you forget your phone unlock password, please contact with local authorized service center or your tradesman to unlock your phone.

Connect to network

After unlocking the SIM card successfully, the phone will search for an available network automatically (the display

shows “Searching”). Once a connection is setup, the display will show the network provider’s name. At this time, phone is in idle mode, you can make or receiver a call besides:

- Press right soft key to enter phone book
- Press left soft key to enter menu

Attention: If “EMERGENCY” is shown on the screen, it means you are out of service, but you can make urgent calls according to the signal strength.

2.2 Basic operations

2.2.1 Make a call

When the display is showing the network provider’s name, you can make or receiver calls. The signal strength is shown on the top left corner of screen (five signal lines means the strength is in max level).

Moving in a small range can improve the voice quality as the obstructions can affect it greatly.

Make a national call

1. Use the number keys to input telephone number.
2. Press the send key to start call, press the right soft key to delete the last digital. The display will show calling animation when calling. After the call has been answered the display will show the communication status.

-
3. Press end key to end a call.

Area code → Phone number → press send key

Call to a extension number

Some extensions maybe can not call directly, you must connect to the telephone first and then dial the extension number. But if you insert “P” between telephone number and extension number, The phone will dial it automatically and connect to the extension. To input “P”, please long press the **key_star** (the display will show “P” at this time).

Area code → Telephone number → P → Extension number → Send key

Example for use “P” :

If you have a voice mail system and the telephone number is 8880000, mail box number is 6666, password is 8888. You can dial like this:

8880000 P 6666 P 8888

The first part of this number used to connect to the voice mail system.

After connection is setup, send 6666 to choose mail box.

Before send the password 8888, the second “P” will cause a delay of five seconds (The first “P” means waiting for connection setup, other “P” means a delay of five seconds).

Make a international call

To make a international call, long press key 0 until a “+” shown on the screen. This will permit you make a call in any country even you don’t know its country code (in China, it is 00).

Enter the country code and complete phone number after the prefixal character “+” is entered. Usually the country code of Germany is 49, Britain is 44 and Sweden is 46.

Please remove the leading “0” of the area code.

For example, if you call a hot line from other country, you should dial:

+86 21 114

+ Country code Complete phone number Send key

Make a call from call history

Every phone number you had called or answered is saved in the call history. All the numbers saved in the call history are classified according to dialed calls, received calls and missed calls. The phone also provides an option for you to view all the calls at a time. When the list is full, the old number will be replaced by the new one automatically. To view the list, please follow the steps below:

- To view dialed calls records, press send key
- All the numbers in the list can be dialed by just press the send key

Press OK to view the details of the number is the list, select save in the options can save it to phone book.

2.2.2 Make a emergency call

Only in GSM system coverage, you can make a emergency call. The display will show “EMERGENCY” if

your network provider does not provide service in this area to tell you that only emergency calls can accept by GSM system. You also can make emergency calls without SIM card if you in GSM system coverage.

2.2.3 Phone

If the installation of the key answer to the arbitrary open, the key will answer the call, according to arbitrary, Otherwise, depending on dial-up access Ruanjian key or left unanswered, then left Ruanjian can call. If headphones have stuck, you can also use the headset button to answer the call. If you inconvenient button can be set up to automatically receive opened, and has stuck headphones, in the ring or vibration, phone access.

2.2.4 Phone records

You can for your walkie-talkie phone records and a recent memory has been used since the time of all calls (see section 6.1 "conversation").

2.2.5 Call menu

In a state of the phone, the phone can enter by choice option. Menu option calls on the operation and function of the same operation. Call the menu can be seen only in the course of conversation, call waiting, call transfer, multi-functional needs of network support calls, please contact your network supplier.
